Business Insights

A) Real Estate Property Insights Dashboard

- The platform covers **20 states and 42 cities**, showing wide national expansion and strong market reach.
- With **250K property listings**, the platform handles a large, active real-estate inventory suitable for high-volume analysis.
- The **average property price of 255 Lakhs** highlights strong demand for mid-to-high-end residential properties.
- A **median price of 9.2K per SqFt** indicates that most listings are concentrated in premium urban markets.
- Only **20.09% properties qualify as Good Investments**, showing scarcity of high-ROI opportunities in the current market.
- A large **80% share of Bad Investments** reflects inflated prices or low future value potential across many regions.
- All BHK categories show a similar pattern, with **only ~0.4K Good Investment properties vs ~6K Bad Investments** per BHK type, indicating consistent investment quality regardless of configuration.
- Higher BHK units (4BHK & 5BHK) show **slightly higher price per SqFt (6.1K–6.2K)**, confirming premium positioning.
- East-facing properties show the **highest average price (~2397.9K Lakhs)**, reflecting stronger cultural preference and demand.
- South-facing homes show **slightly lower prices (~2369.2K Lakhs)**, making them less preferred in many regions.
- Larger properties between **4000–5000 SqFt still maintain ~20% Good Investment share**, showing consistent ROI potential across sizes.
- Cities with the highest number of good investment opportunities include: **Coimbatore (6.46K), Ahmedabad (6.41K), Silchar (6.40K), Durgapur (6.39K), and Cuttack (6.36K)**, making them the strongest markets for ROI-focused buyers.
- The **Premium price segment dominates with 0.18M listings**, representing the biggest share of inventory.
- Mid-range properties form **0.05M listings**, indicating balanced but smaller market representation.
- Budget homes are limited to **0.02M listings**, showing low supply and potentially high competition for affordable housing.
- Property type distribution (Apartment, Independent House, Villa) provides diverse options, but apartments likely form the majority based on total listing volume.

- The dominance of high-value properties and limited good-investment options suggest a **seller-driven market** with elevated pricing across many cities.

B) Future Value & Investment Dashboard

- The platform shows a **Total Future Market Value of ₹93.52M**, indicating a strong projected growth across the property portfolio.
- A **Median Future Price of 373 Lakhs** confirms that most properties are expected to enter the premium price segment in the next 5 years.
- A **Median Appreciation of 0.47 (47%)** shows steady long-term value growth across top locations.
- Total appreciation expected across all properties is **₹29.87M**, signaling high wealth-generation potential for long-term investors.
- The **Median Price per SqFt of ₹9.2K** indicates continued demand for high-value urban properties.
- 5-Year future price distribution peaks around the **700–800 Lakhs band (up to 993 listings)**, showing strong investor preference for upper-mid and premium segments.
- BHK-wise comparison shows consistent future pricing, with **all BHK types averaging between 374–379 Lakhs**, indicating uniform demand across configurations.
- Karnataka and Tamil Nadu lead in present-day pricing with **average property prices of 257 Lakhs**, showing strong high-value residential markets.
- Odisha exhibits the **highest appreciation rate (5952 units)**, followed by Tamil Nadu (5927) and West Bengal (5924), making them the **top 3 high-growth states**.
- Investment opportunities table highlights the strongest deals—top listings show **5-year appreciation values between ₹450–600 Lakhs**, delivering **38%–51% appreciation** across states like Andhra Pradesh, Assam, Bihar, and Chhattisgarh.
- Current vs future price comparison reveals significant upside, with properties in higher **Price_per_SqFt segments (0.70–0.90)** showing maximum expected future price uplift (₹30M–₹40M).
- Lower-priced properties (Price_per_SqFt below 0.30) show limited future value (₹10M), indicating lower ROI potential for budget buyers.
- Mid-range properties (Price_per_SqFt 0.40–0.60) show strong future valuation between **₹15M–₹25M**, making them ideal for balanced-risk investors.
- Future price distribution highlights **broad investment diversity**, with more than **800+ future high-value properties** clustered in multiple bands.
